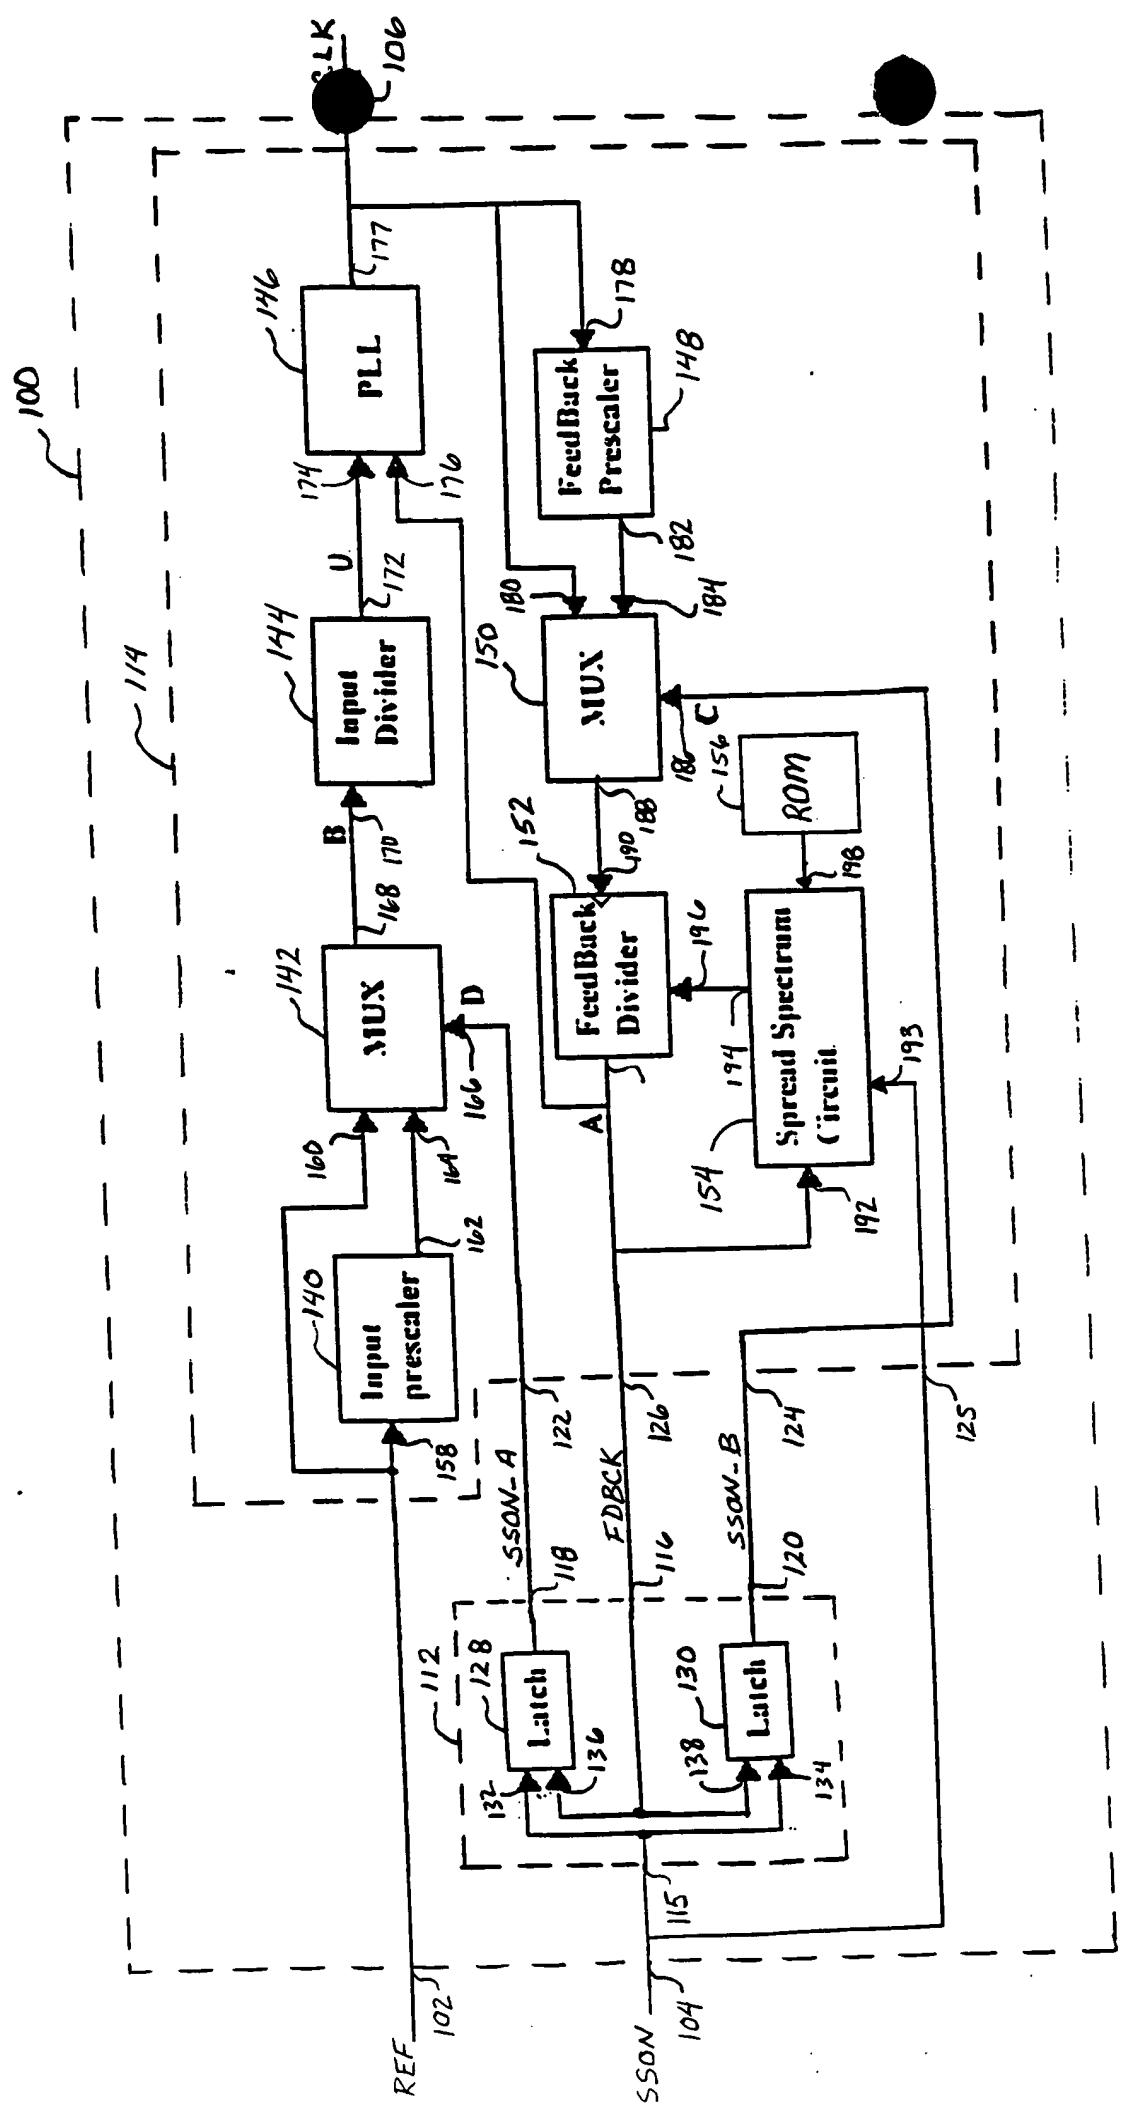

FIG.4

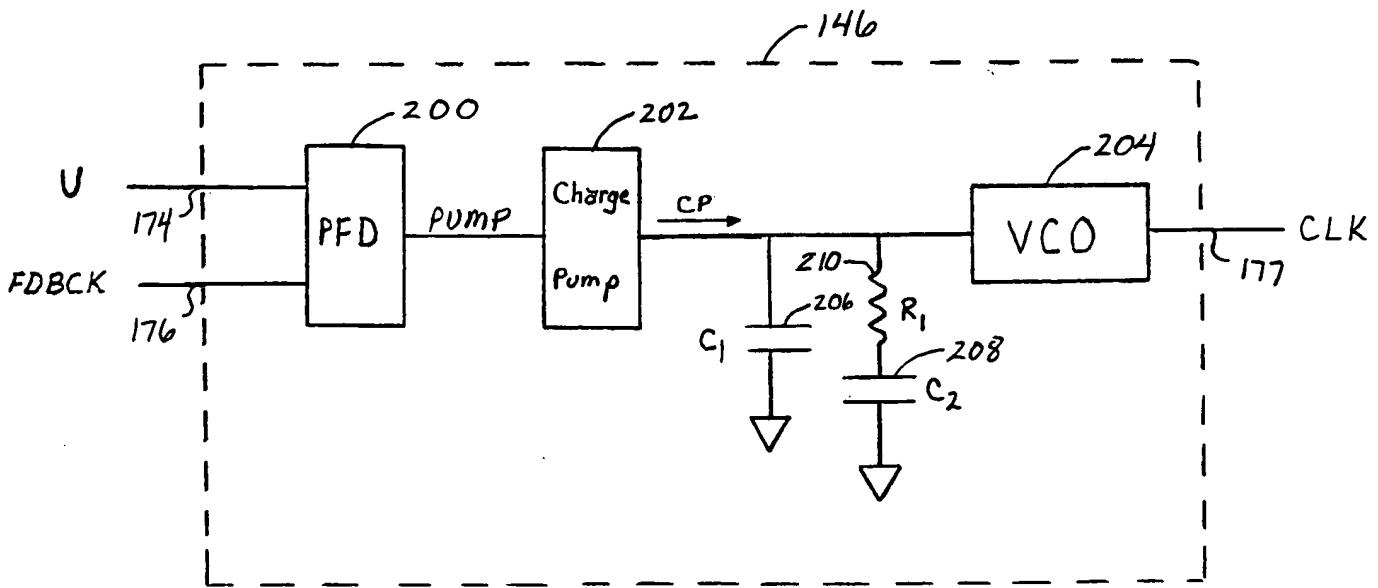

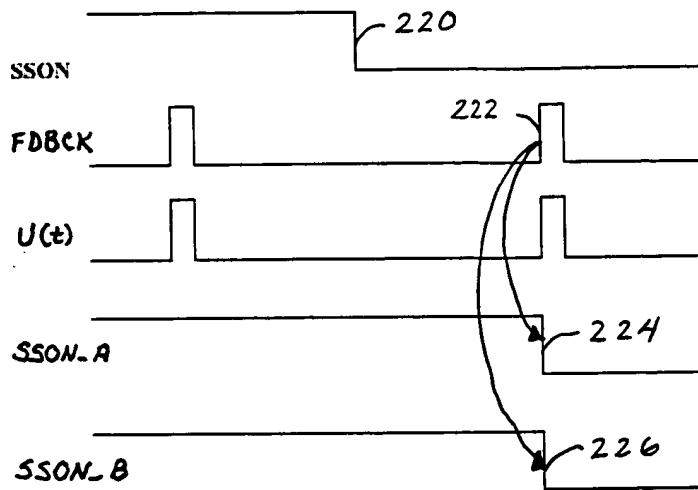

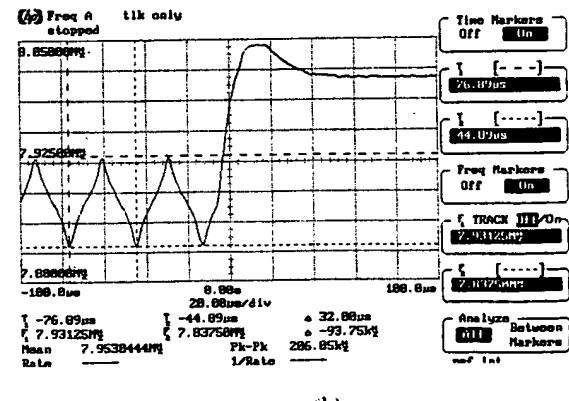

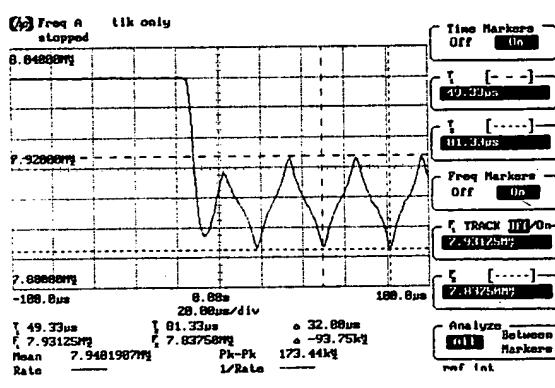

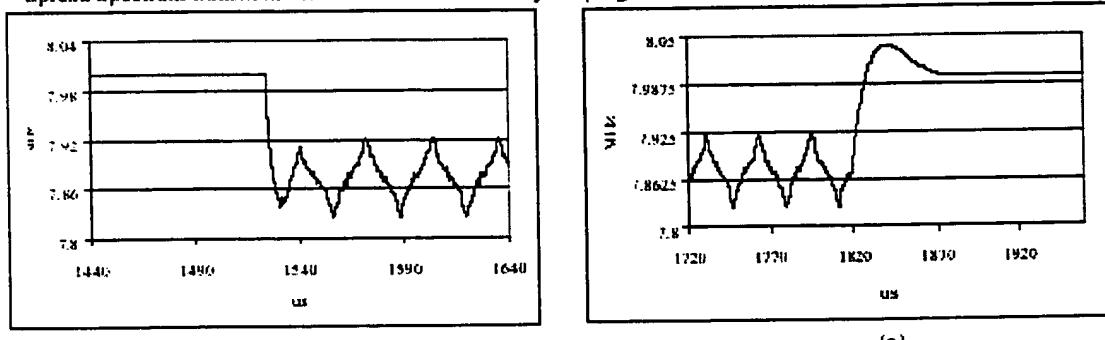

FIG.5

Spread Spectrum transition behaviors are controlled by the program

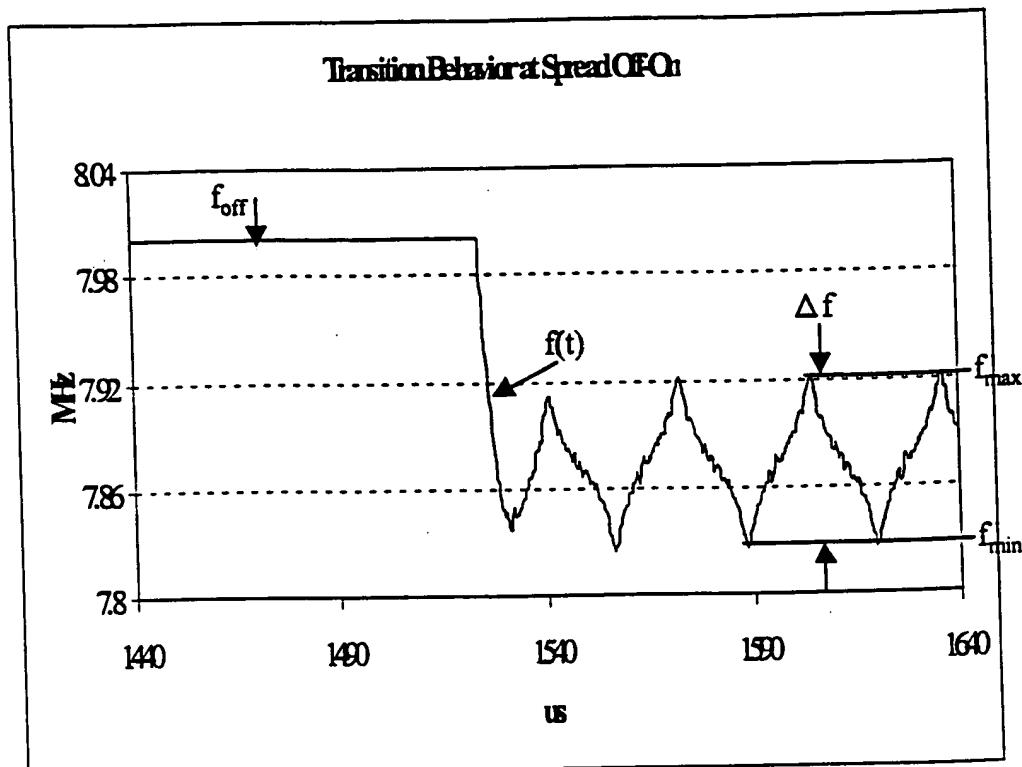

(a) Simulation (b) Measured results in off-on transition

(a) Simulation (b) Measured results in on-off transition

FIG. 6

Criteria for determining “good and bad” SS transient behavior

$f(t)$: PLL's running frequency in transient period

f_{off} : PLL's SSCG off frequency

f_{max} : Maximum frequency in SSCG on

f_{min} : Minimum frequency in SSCG on

Δf : Peak to peak frequency in SSCG

Criteria need to be satisfied:

Frequency running range during transient $f_{min} \leq f(t) \leq f_{off}$

FIG.7

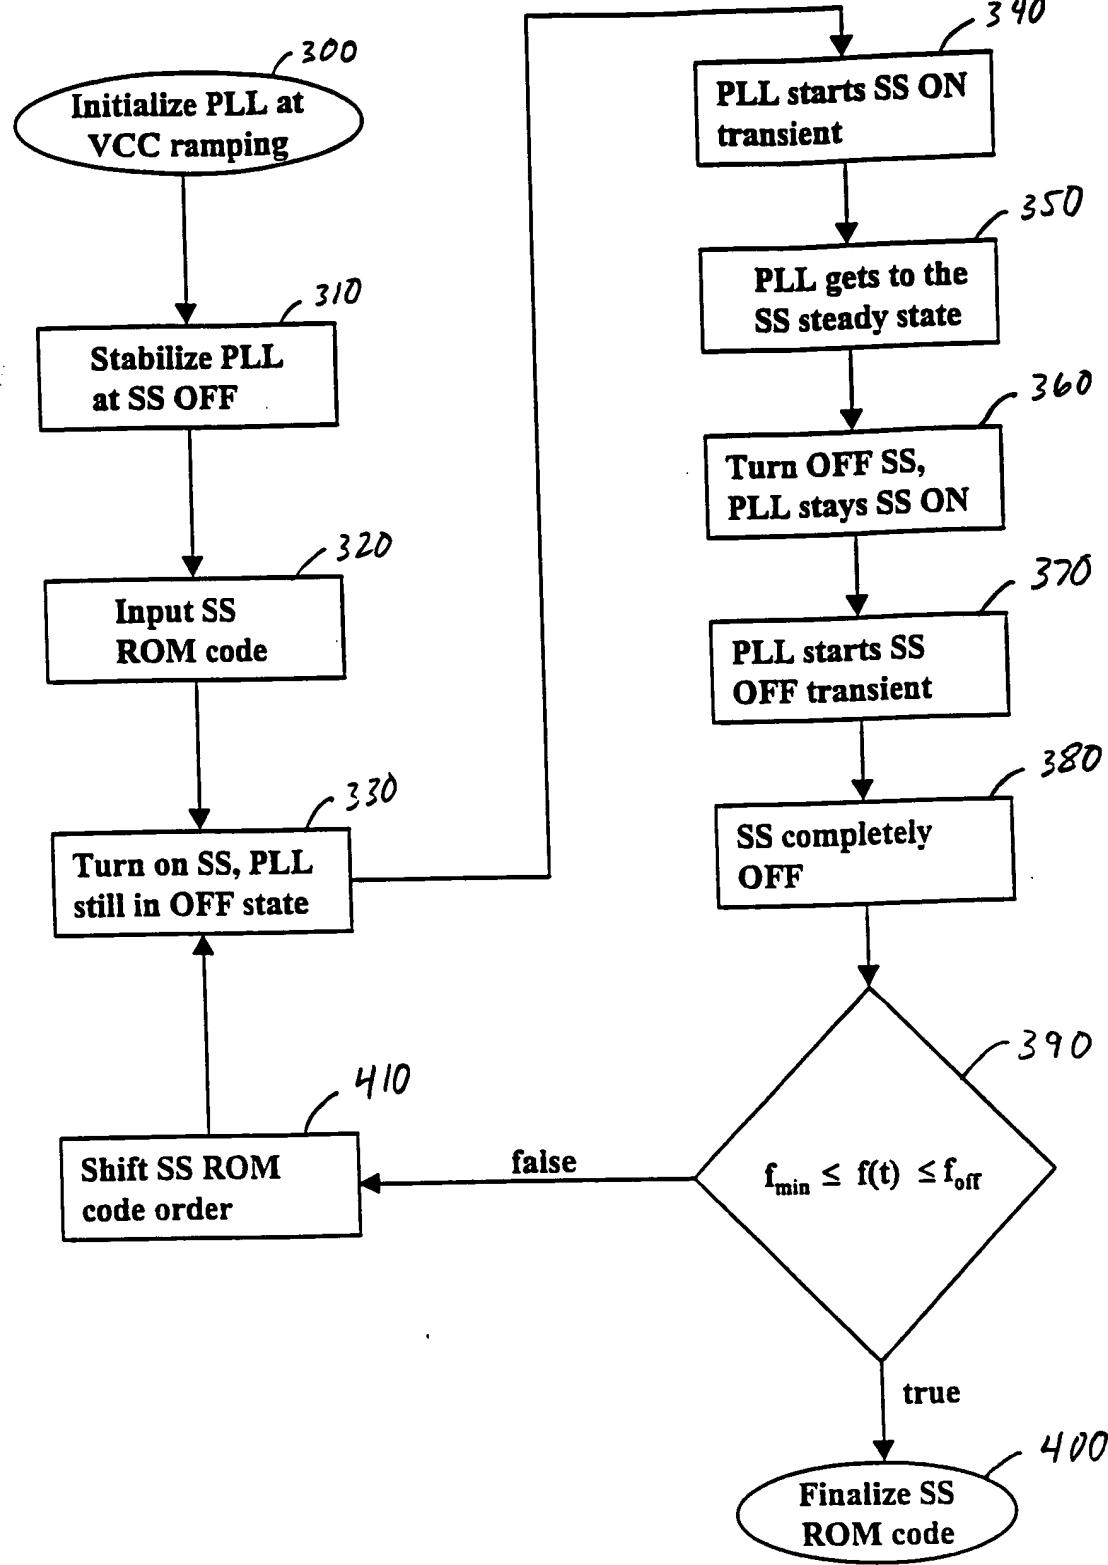

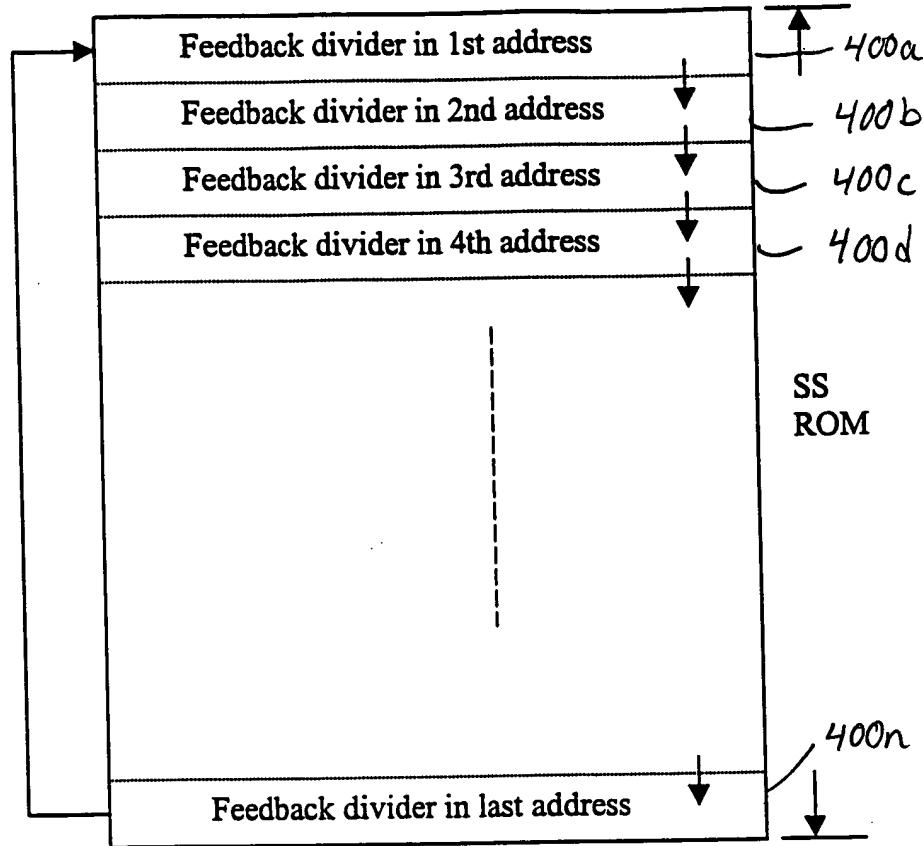

FIG.8

Order shifting step in response to bad behavior

156

Move feedback divider in last address to 1st address and shift down SS ROM code.

FIG.9
